

Fixings 26

U60X colour natural

Instructions for use

1

The product must be stored at a suitable temperature for a time before being used.

2

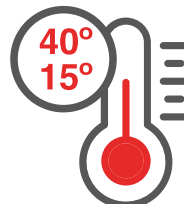

The surface must be clean, dry and free of grease. We recommend cleaning it with a cloth and alcohol to remove impurities.

3

Let the surface dry.

4

The application temperature of the surface and the base must be between 15°C and 40°C.

5

Remove the green liner from the base, trying not to touch the adhesive.

6

Press firmly for a few seconds.

7

Wait a few minutes before applying a load so that the adhesive is completely stuck to the surface.
